Regional Preferred Pumper List *Fats, Oils, and Grease (FOG) Program*

Rogue Valley Sewer Services (RVS) has established a Regional Preferred Pumper Program for those companies that properly pump, haul, and dispose of hydromechanical grease interceptor (HGI)/gravity grease interceptor (GGI) waste. Pumpers will satisfactorily pump out HGI/GGI waste to RVS cleaning standards and receive random inspections. As approved registered participants in the Preferred Pumper Program, pumpers will agree both initially and continually that they will meet the Preferred Pumper criteria as outlined by RVS. Participants that fail to meet the Preferred Pumper criteria and program standards may be removed from the Program.

The RVS Preferred Pumper Program is strictly voluntary and not a requirement to service HGI/GGI's in the RVS service area. However, pumpers are **required** to follow all applicable Local, State, and Federal regulations regarding cleaning standards and disposal of pump out waste. **This list does not constitute an endorsement of any private contractor.**
