Regional Preferred Pumper List

Fats, Oils, and Grease (FOG) Program

Rogue Valley Sewer Services (RVSS) has established a Regional Preferred Pumper Program for those companies that properly pump, haul, and dispose of hydromechanical grease interceptor (HGI)/gravity grease interceptor (GGI) waste. Pumpers will satisfactorily pump out HGI/GGI waste to RVSS cleaning standards and receive random inspections. As approved registered participants in the Preferred Pumper Program, pumpers will agree both initially and continually that they will meet the Preferred Pumper criteria as outlined by RVSS. Participants that fail to meet the Preferred Pumper criteria and program standards may be removed from the Program.

The RVSS Preferred Pumper Program is strictly voluntary and not a requirement to service HGI/GGI's in the RVSS service area. However, pumpers are **required** to follow all applicable Local, State, and Federal regulations regarding cleaning standards and disposal of pump out waste. **This list does not constitute an endorsement of any private contractor.**
